

Eibach Replacement Line

Product Line Overview

HIGH-QUALITY OE-REPLACEMENT SPRINGS

- **Development and production in Germany and USA**
- **Made to OE guidelines IATF 16949 / ISO9001:2015**
- **Extensive references among car manufacturers and OEMs**
- **70 years of experience as a spring manufacturer**
- **OEM's often use Eibach to produce their springs**

With more than 70 years of spring winding experience, Eibach has become a leader in high-quality suspension manufacturing, and maintained its position as a trusted OE-supplier to the top automotive manufacturers across the globe.

Eibach has implemented its expertise of industry leading quality and safety standards to produce a new line of factory replacement springs called the Eibach Replacement Line (ERL). This range of springs is the perfect solution to those customers suffering from broken, worn or damaged suspension springs in search of a quality replacement. The application list is extensive and offered globally for hundreds of common applications ranging from Audi to Volkswagen or Chevrolet to Toyota. Backed with Eibach's Limited Lifetime Warranty, the ERL program ensures an easy replacement solution for you and your customers.

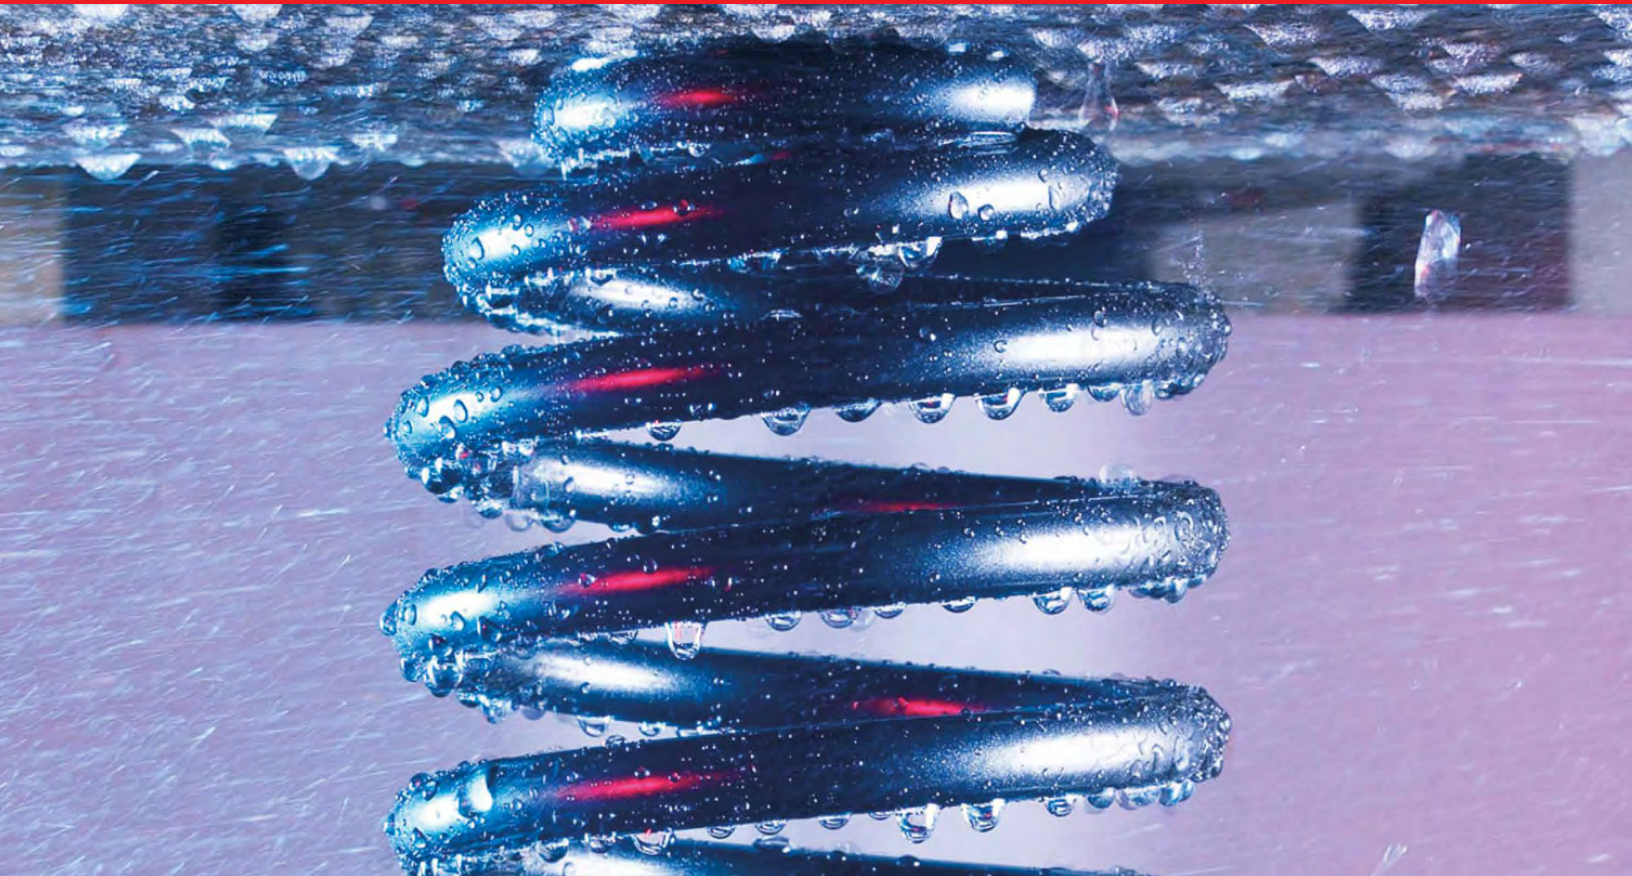

PRODUCTION EXPERTISE

- **State-of-the-art CNC cold forming of springs up to 23 mm in wire diameter using patented pre-hardened, cold drawn wire**
- **For 23 mm - 38 mm wire diameter, annealed materials such as chrome vanadium are used and are heat-treated after winding**
- **State-of-the-art grinding and production machinery**
- **Chamfering of spring ends (in and outside) by robotics**
- **Improved dynamic durability achieved through state-of-the-art shot peening techniques**
- **“Settling” minimization achieved through controlled heat-setting processes**

Eibach exclusively uses high-strength or hardened materials, and manufactures according to the highest standards in the automotive industry. Eibach springs are designed to provide benefits in terms of quality, durability, practicality, weight reduction and vehicle dynamics.

By combining heat treatment, shot peening and a durable corrosion protection guarantees durability and extreme longevity. Each spring is set to block to ensure that after installation the vehicle remains at the correct ride height. Once completed, Eibach Replacement Line springs are protected against damage by optimized packaging – afterwards an extensive product guarantee ensures the customer that they have made the right choice with Eibach.

EIBACH QUALITY GUARANTEED

- **In-house electrostatic powder-coating (polyester | epoxy resin)**
- **Zinc phosphating as pre-treatment and to prevent infiltration of corrosion**
- **Durability tests (static | dynamic), also under corrosion influence**

Each Eibach spring goes through rigorous testing to ensure long-lasting durability. Raw springs are first sent through a five-stage-pre treatment before moving onto powder coating. Then the springs are run through a fully automated in-house powder coating line, ensuring a thorough finish. The springs are then run through a 500 hour salt spray test amongst others, to test the coatings under the most extreme conditions.

Additionally, each Eibach product is backed by a Limited Lifetime Warranty, and ERL is no exception. The warranty covers the life of the spring and beyond, meaning that your new springs will always be covered for the miles to come. For more information regarding the Eibach Limited Lifetime Warranty, visit [eibach.com/warranty](https://www.eibach.com/warranty).
